

Staff Geologist

Location: Seattle, WA

Posted: August 10, 2018

Description:

Aspect Consulting, LLC, an earth science and engineering consulting firm, is seeking an entry-level Staff Geologist to join our team of strategic advisors supporting our environmental practice on assessments of contaminated properties. This is a full-time, career-track position, with the initial professional development focus on field data collection, growing over time into either geologic and hydrogeologic analyses, and eventually project and client management. We are looking for a motivated self-starter with attention to detail that can work on the following primary responsibilities:

- Conducting field activities at closed landfills and contaminated sites, including drilling and soil logging and sampling; well installation and development; groundwater sampling; air monitoring and sampling; landfill gas monitoring; excavation monitoring and construction oversight;
- Operations and maintenance of soil and groundwater remediation systems;
- Compiling and analyzing data, including preparation of graphical representations of subsurface conditions and geologic/hydrogeologic conceptual site models;
- Performing simple quantitative analysis of groundwater systems; and
- Field report preparation and technical report writing.

Preferred Qualifications

- Degree in geology, or closely related field; Masters degree is a plus;
- Eligible for Geologist-in-Training (GIT) professional registration;
- 0 to 2 years of experience conducting field work on environmental assessment and remediation projects.
- Experience working on construction or industrial sites and around hazardous materials;
- OSHA 40 hour HAZWOPER training;
- Experience with and/or coursework focused on Pacific Northwest geology including glacial deposits and Columbia Basin basalts;
- Ability to collect quality field data with high attention to detail and thorough documentation;
- Practical knowledge of data entry and management using Excel and environmental data collection and analysis methods;
- Knowledge of soil classification standards,
- Strong quantitative and analytical skills; and
- Clear writing and communication skills.

Special Requirements

- Valid driver's license;
- Must be able to work outdoors in all weather conditions, and in rugged and sometimes remote field locations for extended periods of time;
- Must be able to travel long distances and accommodate overnight travel; and
- Must be able to operate cars, vans and pickup trucks in various weather conditions and after dark.

**Workplace Setting**

- Interactive team of 100+ professionals across seven offices in Washington and Oregon
- Casual, collaborative, and professional office environment

Why Aspect?

Active, Engaged, Growing. Aspect Consulting is home to regionally focused earth + water specialists in hydrogeology, geology, environmental remediation, and engineering. A diverse blend of public and private projects ranging in technical complexity provides you a balance between applied problem solving, technical analysis, and design. For ambitious entry-level and seasoned practice builders alike, Aspect offers a supportive, collaborative workplace designed to help you thrive and grow professionally.

Aspect offers a competitive benefits package and incentive compensation system to reward the collective team and recognize individual contributors. Aspect Consulting is an equal opportunity employer.
